General Sample Submission Form

Guidance for sending your sample for pest and disease testing to Fera Plant Clinic

Testing Guidance

- If no specific testing requirements are given on this submission form, your sample will automatically undergo and be charged as our 'Diagnose my Plant' test – details are here <u>https://www.fera.co.uk/plant-problem.html</u>.
- Following any initial testing we may contact you about further testing that may be recommended.
- Please provide as much accurate information as possible on this form to aid our diagnosis.
- Our standard tests can be found on our website: <u>https://fera.co.uk/crop-health</u>
- For **bespoke tests or quotes** please contact us at <u>plantclinic@fera.co.uk</u>

How to select your sample

The sample you send provides the key for diagnosis, so please consider the following:

- Try to send a sample that is representative of the problem we need to see the full range of symptoms.
- For diseases, try to include the boundary between healthy and diseased tissue and where possible, include healthy material for comparison and mark as such.
- If symptoms on leaves or shoots show general discoloration or dieback, suggesting possible root damage, then please send us a whole plant (where possible) and include the roots and surrounding soil.
- If you suspect the problem is due to nematodes, please include separate soil and plant samples from both the edge of the affected area and an unaffected area (marked as such).

Whole plants	Enclose the moistened root ball in a plastic bag sealed around the plant stem. Place the whole plant in a second plastic bag, inflate slightly and seal.		
Leaves and shoots	 For suspected Viral problems place samples in a plastic bag, inflate slightly and seal. For Bacterial/Fungal samples - wrap sample in dry absorbent paper. For Nematode samples - wrap in moist (not wet) paper. 		
Fleshy items (Fruit, bulbs vegetables etc)	Then place each type in a plastic bag, inflate lightly and seal. Wrap in dry, absorbent paper, if rotting/breaking down please wrap individually. Place in a plastic bag, inflate slightly and seal.		
Invertebrate pests	Invertebrate pests (insects, mites etc.) should be put in a sealed, crush-proof container. If alive there is no need to put air holes in lid for air, but insects may need to be reared to identify.		
Suspected bacteria sample	Wrapped in dry absorbent paper and placed in a plastic bag. For soft fruit petiole samples, wrap in dry paper absorbent and package in separate batches of 50.		
Potato tubers	Invertebrates - wrap in dry, absorbent paper. Place in a plastic bag, inflate slightly and seal. Other or Unknown diagnosis - wrap in dry, absorbent paper. Do not place in a plastic bag.		
Soil samples	Nematode analysis - place the relevant volume of soil for required test (see website) in a strong plastic bag & seal. Soil sampling protocol available contact: <u>nematology@fera.co.uk</u>		

How to package your sample

All samples should be packed securely with screwed up paper and sent in a strong cardboard box or other crush proof container ensuring that the Sample Submission Form is included in the package inside a separate bag.

Ideally, samples should be dispatched by either courier service or first-class post to arrive at Fera next day. If possible, avoid sending samples over the weekend/Bank holidays, however if unavoidable mark the outer packaging for fresh plant material with **'Please refrigerate on arrival'** if necessary.
