WATER & ENVIRONMENTAL CHEMISTRY PROFICIENCY TESTS

Modern analytical techniques are allowing us to detect chemicals in water at ever decreasing concentrations, and this is changing our understanding of the pollutants that may be present in the environment, which can consequently be an issue for our drinking water. Regular monitoring of these diverse water types is required by governmental regulation to ensure the safety of the water we drink and the environment we live in.

Our extensive programme covers a wide range of water types including, bottled, drinking, waste, and surface waters, and is complemented by schemes for emergency chemical contamination, taste and odour chemical identification, and soil chemistry.

Surface Water

Water for Fapas® surface water proficiency tests is taken from a private pond. The pond is occasionally topped up with ground water from a private bore hole via a series of feeder ponds. The minimum surface residence for water in the source pond is 5 days. For this reason, occasionally in the UK winter season, surface water PTs may be delayed when the source pond is frozen.
